I gave the solutions manual one more star than this forgetful, generic physics book (annoying to follow, BTW). Written like an eighth grade book compared to what I can get online for about \$10 to \$15 overseas. Cutnell and Johnson, WHY EVEN WRITE THIS - - you never challenge the student in a significant way. Typical illustrations.

Cutnell and Johnson has been the #1 text in the algebra-based physics market for almost 20 years. The 10th edition brings on new co-authors: David Young and Shane Stadler (both out of LSU). The Cutnell offering now includes enhanced features and functionality. The authors have been extensively involved in the creation and adaptation of valuable resources for the text.

This two-semester introduction to physics assumes only a background in college algebra. Treatment is especially strong in its discussion of work and energy. Organization is logical and flexible. Text is enhanced by hundreds of applications to biology, medicine, architecture, and technology. Problem-solving techniques are presented via over 250 step-by-step examples involving data from real-life situations. Freebody diagrams are found throughout the text, not just in the mechanics section, and data tables and check boxes of variables help students organize data in the kinematics section. Includes 469 thought-provoking questions

and over 1,600 graded problems. Illustrated.
