Nuclear technology is dual use in nature, meaning that it can be used to produce nuclear energy or to build nuclear weapons. Despite security concerns about proliferation, the United States and other nuclear nations have regularly shared with other countries nuclear technology, materials, and knowledge for peaceful purposes. In Atomic Assistance, Matthew Fuhrmann argues that governments use peaceful nuclear assistance as a tool of economic statecraft. Nuclear suppliers hope that they can reap the benefits of foreign aid-improving relationships with their allies, limiting the influence of their adversaries, enhancing their energy security by gaining favorable access to oil supplies-without undermining their security. By providing peaceful nuclear assistance, however, countries inadvertently help spread nuclear weapons. Fuhrmann draws on several cases of "Atoms for Peace," including U.S. civilian nuclear assistance to Iran from 1957 to 1979; Soviet aid to Libya from 1975 to 1986; French, Italian, and Brazilian nuclear exports to Iraq from 1975 to 1981; and U.S. nuclear cooperation with India from 2001 to 2008. He also explores decision making in countries such as Japan, North Korea, Pakistan, South Africa, and Syria to determine why states began (or did not begin) nuclear weapons programs and why some programs succeeded while others failed. Fuhrmann concludes that, on average, countries receiving higher levels of peaceful nuclear assistance are more likely to pursue and acquire the bomb-especially if they experience an international crisis after receiving aid.

KEY CONTENTS OF THIS GUIDE INCLUDE: - Contains invaluable tips on how to prepare for abstract reasoning tests. - Written by an expert in this field in conjunction with recruitment experts. - Contains lots of sample test questions and answers.

This first volume of the comprehensive, two-volume work on oxidative stress in lung disease introduces the molecular mechanisms, and the role of oxidants in the progression of different lung diseases. The lungs of humans and animals are under constant threat from oxidants from either endogenous (e.g. in situ metabolic reactions) or exogenous sources (e.g. air pollutants). Further, oxidative stress causes the oxidation of proteins, DNA and lipids, which in turn generates secondary metabolic products. The book consists of sections, each focusing on different aspects of oxidant-mediated lung diseases. As such it is a unique reference resource for postgraduate students, biomedical researchers and also for the clinicians who are interested in studying and understanding oxidant-mediated lung diseases. The second volume will incorporate other aspects of oxidant-mediated lung diseases, including prevention and therapeutics.

Acronym agglomeration is an affliction of the age, and there are acronym addicts who, in their weakness, find it impossible to resist them. More than once in recent months my peers have cautioned me about my apparent readiness to use not only acronyms, but abbreviations, foreign isms, codes, and other cryptic symbols rather than common, ordinary American words. Many among us, though, either have not received or have chosen to ignore such advice. As a consequence, what we write and speak is full of mystery and confusion. It is then for the reader and listener and for the writer and speaker that Reta C. Moser has compiled this guide. Its effective application to the art of communication is urged. Such use should help avoid many of the misunderstandings involving terminology which occur daily. Although such misunderstandings are certainly crucial in humanistic and social situations, they are often of immediate import and the trigger to disaster in scientific, technical, and political situations. Some 15,000 acronyms and 25,000 definitions are provided (a 50- and 47 -percent increase over the 1964 edition!), with due credit to Miss Moser's diligence in making the compilation and with the acknowledgment that the acronymical phenomenon is very much with us. This edition, like the first, is certain to be of value to writers, librarians, editors, and others who must identify and deal with acronyms.

This dictionary provides a comprehensive and ready guide to the key concepts, issues, persons, and technologies related to the nuclear programmes of India and Pakistan and other South Asian states. This will serve as a useful reference especially as the nuclear issue continues to be an important domestic and international policy concern.

This volume brings together a collection of papers presented at the annual conference of the Network of Asia-Pacific Schools and Institutes of Public Administration and Governance (NAPSIPAG). The publication reflects the diversity of "grounded voices to be found in the region." While the approaches are different, a distinguishing feature is the depth of local knowledge they exhibit and the manner in which innovation from within the Asia and Pacific region is highlighted.

Pakistan 's relations with China have always been the most important of its relationships with other countries. It is based on trust, respect, and mutual benefit. Over the past 55 years, since the two countries established their diplomatic relations, this relationship has evolved in a manner to serve the interests of both countries. To understand the evolution of this relationship from a correct perspective, it is important to have a brief overview of the relationship between the two countries. China 's adversarial relationship with India has been one of the important factors in its all-weather friendship with Pakistan. Such an intimate relationship between the two had developed at a time when China 's global profile had not developed to the extent that is discernable now. Over the years, Sino-Indian relationship has also matured to a greater degree of engagement. China is now projecting itself as a responsible global power, beyond the sub-continent and the region. One can fathom China 's primordial commitment to Pakistan and China 's imperative need for Pakistan 's support to rein in Muslim separatists operating in China-Pakistan border in the Uygur region, but China needs to calibrate its relationship with Pakistan in the context of these changes and in such a manner so as not to arouse any misgivings in New Delhi. As the book addresses this crucial issue quite deftly, it is hoped that it would prove to be a source of great information for the reader.

Metrology is an integral part of the structure of today 's world: navigation and telecommunications require highly accuratime and frequency standards; human health and safety relies onauthoritative measurements in diagnosis and treatment, as does foodproduction and trade; global climate studies also depend onreliable and consistent data. Moreover, international tradepractices increasingly require institutions to display demonstratedconformity to written standards and specifications. As such, having relevant and reliable results of measurementsand tests in compliance with mutually recognised standards can be atechnical, commercial and statutory necessity for a company. Thisbook, the results of a working group from the French College ofMetrology and featuring chapters written by a range of experts from a variety of European countries, gives a comprehensive andinternational treatment of the subject. Academics involved inmetrology as well as people involved in the metrology capacities ofcompanies and institutions will find this book of greaterinterest.
