Finding the Intersection of Neuroplasticity, Stroke ...

Neuroplasticity is the ability of the central nervous system to remodel itself. In the last few decades, we have learned that neuroplasticity is not only possible but that it is also constantly occurring; the brain is always changing. Neuroplasticity is how we adapt to changing conditions, learn new facts, and develop new skills.

Intense synaptic plasticity occurring in dendritic spines establishes an important link between functional and structural neuroplasticity. Dendritic spines thus shape developmental trajectories, learning and adapting to existing or new conditions. 3 Early in development, dendrites have relatively few spines. Subsequent molecular processes result

concepts; and identify and review the themes that best characterise the intersection of these three concepts.

Finding the Intersection of Neuroplasticity, Stroke ...
The Polish neuroscientist Jerzy Konorski most likely coined the term neuroplasticity. In 1948, he described the adaptive cellular mechanisms of learning. He observed that learning occurred through a change in the quality of the connections between neurons in the brain.
