Throughout, the presentation is crystal-clear, the tone is reassuring, and the voice is empowering. And the language is inclusive, reflecting today's various family configurations such as single-parent families, blended families formed by second marriages, families with gay and lesbian parents, and families formed by open adoption or surrogacy. Pregnancy, childbirth, postpartum and newborn care: a guide for essential practice (3rd edition) (PCPNC), has been updated to include recommendations from recently approved WHO guidelines relevant to maternal and perinatal health. These include pre-eclampsia & eclampsia; postpartum haemorrhage; postnatal care for the mother and baby; newborn resuscitation; prevention of mother-to- child transmission of HIV; HIV and infant feeding; malaria in pregnancy, interventions to improve preterm birth outcomes, tobacco use and second-hand exposure in pregnancy, post-partum depression, post-partum family planning and post abortion care. The aim of PCPNC is to provide evidence-based recommendations to guide health care professionals in the management of women during pregnancy, childbirth and postpartum, and newborns, and post abortion, including management of endemic diseases like malaria, HIV/AIDS, TB and anaemia. The PCPNC is a guide for clinical decision-making. All recommendations are for skilled attendants working at the primary level of health care, either at the facility or in the community. They apply to all women attending antenatal care, in delivery, postpartum or post abortion care, or who come for emergency care, and to all newborns at birth for routine and emergency care.

The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.
