Elephant cognition is the study of animal cognition as present in elephants. Most contemporary ethologists view the elephant as one of the world's most intelligent animals. With a mass of just over 5 kg, an elephant's brain has more mass than that of any other land animal, and although the largest whales have body masses twenty times those of a typical elephant, a whale's brain is barely twice the mass of an elephant's brain. In addition, elephants have around 257 billion neurons. Elephant brain

Elephant cognition - Wikipedia

The Elephant is the " feelings " brain. It helps us to know how we are feeling. It enables us to remember the things that we 've learned and also what they mean. It 's everything we remember, and the emotions attached to those memories.

The Elephant in the Brain (because it's about a big thing in our brain that we don't acknowledge) argues that many of our actions are motivated by a desire to cultivate allies and mates and, to cultivate effectively, humans have learned to lie others and ourselves.

The Elephant in the Brain: Hidden Motives in Everyday Life...

The Elephant in the Brain is all about Stage 3 and the sobering realization that our minds aren't just hapless and quirky, but downright devious. So where can we turn when our own minds are lying to us? A: We have to triangulate ourselves from theoretical priors and behavioral data. That's what Robin and I attempt to do in Part I. 4.
